

React <a> “anchor tag” with link example, added with template literals,

```
<a href={ `/job/${job.id}` }>Read More</a>
```

Suppose I want to see only three elements from the loop, using slice method,

```
{jobs.slice(0, 3).map((job, key) => (  
  <JobListing job={job} key={key} />  
))}
```

React Hooks

React hooks er snippet,

```
let [showFullDescription, setShowFullDescription] = useState(false);
```

- Ekhane first array data hocche value
- Second one is function, jeta functional output expect kore, for an example,

```
setShowFullDescription(false)
```

setShowFullDescription ke call kora jay button er **onClick** er moddhe but eta exactly call hoye jay tai jodi etake call kora hoy tai **function** er moddhe call korte hoy,

```
button onClick={  
  ()=> { // function block  
    // setShowFullDescription function executes here  
  }  
}
```

React Icons

Step 1: npm i react-icons

Step 2: Ekdm jsx file er upor import korte hobe, for an example JobListing.jsx,

```
import { FaMapMarker } from "react-icons/fa";
```

- FaMapMarker hocche ekta icon jetake react package er maddhome import kora holo

Step 3: Use it like component,

```
<FaMapMarker className="inline text-lg mb-1 mr-1" />
```

Snippet,

```
<div className="text-orange-700 mb-3">
  {/* <i className="fa-solid fa-location-dot text-lg"></i> */}

  <FaMapMarker className="inline text-lg mb-1 mr-1" />

  {job.location}
</div>
```
