Step 1:

For creating a project, suppose vue/react with vite,

npm install vite@latest react-crash-2024

Step 2: port change korte hobe, from the project folder find **vite.config.js**, then change the port like this code snippet,
```js
import { defineConfig } from "vite";
import react from "@vitejs/plugin-react";

// https://vitejs.dev/config/
export default defineConfig({
  plugins: [react()],
  server: {
    port: 3000,
  },
});
```

Port change kore just 3000 e switch kore newa holo

Learning purpose e ja kora holo, **src->assets** er under e **app.css** ke remove kore dewa holo and **app.jsx** ke ekdm clean kore fela holo.

Then ekta extension install kora holo, it gives easy snippets to generate components,

For an example, on the **App.jsx** empty page, type, '**rafce**' then press tab. It will create a react component automatically.
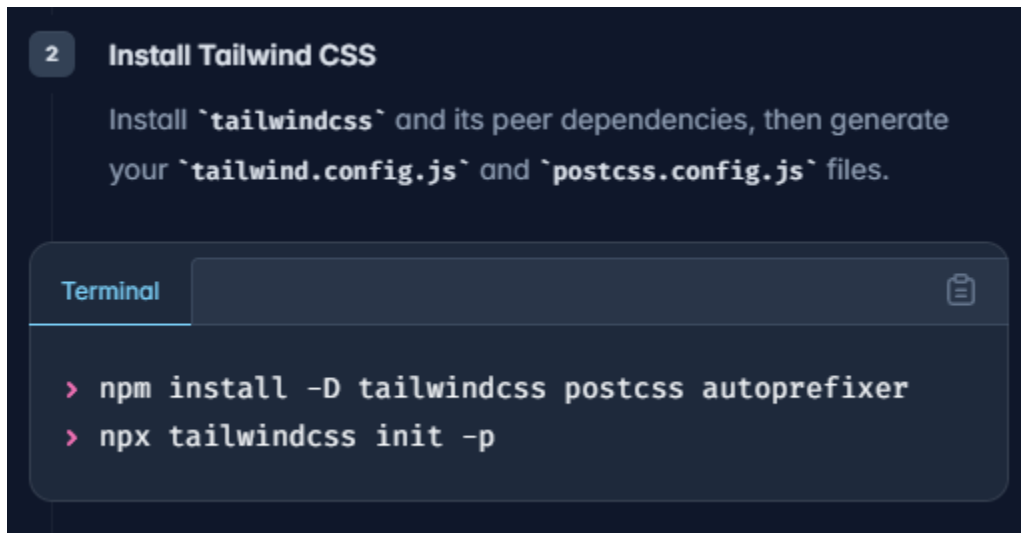

Index.css er shob remove kore dewa holo.

Step 3: Tailwind Setup

https://tailwindcss.com/docs/guides/vite

- Run this command, For tailwind configuration,
  npm install -D tailwindcss postcss autoprefixer

  npx tailwindcss init -p

From **tailwind.config.js,**

```js
/** @type {import('tailwindcss').Config} */
export default {
  content: ["./index.html", "./src/**/*.{js,ts,jsx,tsx}"],
  theme: {
    extend: {
      fontFamily: {
        sans: ["Roboto", "sans-sarif"],
      },
      gridTemplateColumns: {
        "70:40": "70% 28%",
      },
    },
  },
  plugins: [],
};
```

According to tutorial

- Font-damily add kora hoise
- gridTemplateColumns : The left column will be 70% and the right column will be 30%

Then docs e step wise follow kore jete hobe for **Tailwind** setup.
